

Smart Card System

AC-9S Access Control System

mifare series

AC-9S Access Control Reader is a special design for applications that require high security but at a very attractive price. It is based on Mifare Contactless Card Technology. Also, it employs the latest IR communication technology to add/delete cards to access the system.

In addition, it works perfectly if it is used together with "Smart Open Transformer". "Smart Open Transformer" is a transformer that can accept special signals to control door lock. Door can't be opened even the reader is damaged by thief.

AC-9S Access Control Reader is a high technology product that can help you to improve your company security and upgrade your company image. Contact us now and let our experts to show you how it works.
